About this guide

WHAT is this guide used for?

This guide includes context and step-by-step 'how to's' about the **D365 F&O: AR Collections Customer Payment Journal Controls process**. It has been developed as the primary on-the-job reference to support WTG team members responsible for completing D365 F&O system tasks.

HOW to navigate this guide?

This guide is made up of Parts and Topics. A Part represents a collection of related topics (e.g., a set of related procedures). A Topic represents a specific item of information related to the Part. Each Part and Topic can be accessed from the Table of Contents.

Part 1: What do I need to know?

This part provides an overview of the end-to-end business process covered in this document. It outlines the purpose, scope, and context of the process within the broader functional stream, and introduces key roles, systems, and activities involved.

Part 2: How do I do it?

This part contains detailed steps on completing specific tasks in the D365 system. The instructions used in this guided approach are split into two main (2) sections:

- Action: section one (1) of the information table; one individual action per row, beginning with an italicized verb.
- Description: section two (2) of the information table; location, exact values, context, expected results and relevant notes.

Note: Part 1 and Part 2 will be consistent across all D365 Procedure Guides (PGs). PGs may include additional Parts covering major topics related to the specific module / PG.

Hyperlinks

Hyperlinks are used throughout this document. *Click* on a hyperlink to directly navigate to another topic in this guide, or to an external resource.

Key

The table below defines what colors are used to highlight specific sections in this document:

Color	Definition
	Highlight an off-system action
	Highlights the start / end of a step.
	Highlights the end of the process.

Part 1: What do I need to know? (AR Collections Customer Payment Journal Controls)

High-level process

Part Description

This reference lists the controls that apply when you prepare a **Customer payment journal** (CPJL) to transfer funds between customer accounts, distribute a parent-account payment across child accounts, or restore a written-off or overpayment amount. It includes only the controls demonstrated in Part 2 of the AR Training D365 session. The steps are in the three guides listed in Part 2.

Posting permission, approval, checking the result after posting, and correcting or reversing a posted journal are not covered until confirmed.

Initiation

- You are preparing a CPJL to transfer or restore customer funds.

Stream

Stream	Process Area	Key Roles
Accounts Receivable	AR Collections	• To be confirmed

Process

The controls apply to these processes:

#	Action	Who	When	Where
1	AR Collections Customer Account Transfers	To be confirmed	When a payment is on the wrong customer account, or funds must move to a confirmed related account	D365
2	AR Collections Parent Payment Distribution	To be confirmed	When a payment on a parent account must be distributed to confirmed child accounts	D365
3	AR Collections Overpayment and Write-Off Restoration	To be confirmed	When an overpayment or written-off amount must be put back on a customer account	D365

Roles and responsibilities

Overview

The business roles that prepare and post these journals are not yet confirmed.

Tasks / Business Roles	To be confirmed
AR Collections Customer Account Transfers	R
AR Collections Parent Payment Distribution	R
AR Collections Overpayment and Write-Off Restoration	R

*R = Responsible

Key concepts

Overview

These controls apply to every CPJL entry in the three guides, unless a row says otherwise. The amounts used in the training are examples only, not thresholds.

Journal set-up

Control	What to do
Use CPJL	Use the Customer payment journal (CPJL) to transfer funds between customer accounts and to restore written-off or overpayment amounts.
Describe the journal and every line	Enter a clear description on the journal and on each line, including the relevant customer code, so the entry can be identified in each customer's history.
Use the right date	The current date is the default. A wrong-account correction may use the original customer payment date when appropriate. Use a prior-period date only when it is required and the period is open.
Keep the original currency	Enter every line in the currency of the original payment or transaction.

Line coding

Control	What to do
Debit to remove, credit to return	Funds removed from a customer account are a debit. Funds placed on a customer account are a credit.
Offset to the correct ledger account	Set **Offset account type** to **Ledger**. For a transfer between customer accounts, use the bank-to-bank transfer clearing account, never a bank account. For a restoration, use the Overpayment ledger.
Leave unsupported fields blank	For a restoration, do not enter financial tags, an invoice number or a bank account.
Keep pre-populated dimensions	For a restoration, do not change the financial dimensions that fill in automatically.
Complete each line before the next	Tab through every field in a line before you start the next one, so that fields such as the voucher fill in correctly.

Validation and posting

Control	What to do
Balance the journal	For a transfer or distribution, total debits must equal total credits. In a distribution, the child credits must add up to the parent debit.
Simulate before posting	Run Simulate Posting. A blue result means the journal is ready to post. A red result shows errors to read and correct. If you cannot resolve an error, log a request through the D365 issue form (see **Additional Resources**).

© 2026 WiseTech Global

Control	What to do
Post only when complete and validated	Post only after every line is complete, the journal balances and Simulate Posting succeeds.

Allocations and amounts

Term	Description
Partial allocation	In a parent-account distribution, move only the confirmed amount. The rest stays on the parent account, with a note that explains its purpose.
Example amounts	The training uses example amounts: $100, and a $10,000 receipt with $8,000 distributed and $2,000 left on the parent account. They are examples only, not thresholds, limits or approval levels.

Not covered by this reference

Topic	Status
Who may post a CPJL	To be confirmed.
Whether approval is needed	To be confirmed.
Checking the result after posting	To be confirmed. The AR Collections Customer Account guide covers reviewing customer transactions.
Correcting or reversing a posted journal	To be confirmed.
An unposted journal that is no longer needed	To be confirmed.
The security role needed	To be confirmed. If a page or control is missing, a security setting is a possible cause, not a confirmed one.

Part 2: How do I do it? (AR Collections Customer Payment Journal Controls)

The procedures that apply these controls are in these guides:

- **AR Collections Customer Account Transfers**: transfer funds between customer accounts.
- **AR Collections Parent Payment Distribution**: distribute a parent-account payment across child accounts, including a partial allocation.
- **AR Collections Overpayment and Write-Off Restoration**: put a written-off or overpayment amount back on a customer account.

Each guide includes the Simulate Posting and posting steps, so this reference has no procedures of its own.

Part 3: Reports (AR Collections Customer Payment Journal Controls)

Overview

Reports for these processes are pending SME confirmation.
